

## AstraSync™

**AstraSync™ turns a BlackBerry into an ActiveSync client and synchronizes email, calendars and contacts with Microsoft Exchange compatible servers over-the-air**

### WHAT IS IT?

AstraSync™ is a BlackBerry® synchronization application used by tens of thousands of BlackBerry® smartphone owners worldwide. AstraSync performs two-way over-the-air synchronization of email, calendar and contact data with Exchange ActiveSync compatible servers including Microsoft Exchange, MailSite Fusion, Exchange Online, BPOS, CommuniGate Pro, Zimbra, Scalix, FirstClass, Open-Xchange, Kerio MailServer, SmarterMail, Axigen, Google Apps & Gmail.

AstraSync does this by implementing the Exchange ActiveSync and DirectPush protocols. AstraSync can be downloaded over-the-air and runs silently in the background on the BlackBerry Smartphone. AstraSync works with the native calendar and contact applications on the BlackBerry Smartphone and mimics the Native BlackBerry inbox so no user re-training is required.

### DOES IT WORK WITH BES OR BIS?

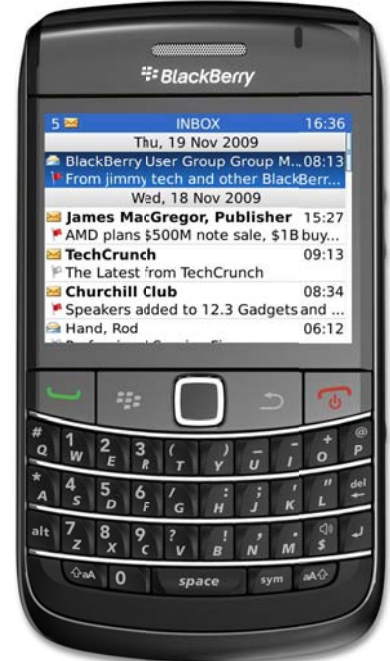

AstraSync establishes a direct https connection between the BlackBerry Smartphone and the server. Customers using AstraSync do not need to purchase a BlackBerry Enterprise Server and are not dependent on the BlackBerry Internet Service.

### HOW DOES IT COMPARE WITH BES OR BIS?

Customers can realize many benefits by not using the BlackBerry Enterprise Server or Internet Service. Costs are dramatically lower since the BES license costs are substantial. Reliability is substantially higher since there are 50% fewer components to fail.
